Floppy Drums
Ableton Live Pack

Dear Costumer,

Thank you for purchasing 7soundware Floppy Drums Ableton Live pack. Floppy Drums is a collection of kits, instruments and clips recorded from a vintage Yamaha A3000 Hardware Sampler.

So you have a modern approach and the classic sound of hardware samplers all in one easy to use pack.

In this library we developed a new concept and perspective of loops library , using the power of Ableton Drum Rack, instrument Racks and automation in conjunction with Ableton clips we created more than 100 interactive Loops, we like to call this product an Advanced Loops Library.

You can tweak, modify change and interact with the sounds and the arrangement of those loops.

That open's up a totally new perspective for loops usage, we like loops but often you find yourself with something that work standalone but not so much in a production and you want to tweak just some things to adapt it in your music flow and so using Ableton clips system is our answer.
